

1. For **Https connections**, Please check the following configurations for different browsers:

1. Firefox – Go to URL <https://localhost:13591> and add security exception to allow connections.

If connection error still comes, Go to URL **about:config** and set value for **security.mixed\_content.block\_active\_content** to **false** and **security.mixed\_content.block\_display\_content** to **true**.

2. Chrome - Go to URL **chrome://flags/#allow-insecure-localhost** and click on **Enable** and restart Chrome to allow connections.
3. IE 10 and above - Go to URL <https://localhost:13591> and add certificate to **Trusted Root Certification Authorities** if certificate error comes.
